

Project Management

Do your projects always meet deadlines and budgets, with the right quality?

Have your deliveries been late due to delays in sub-projects or critical activities?

We provide highly skilled project managers, with experience from projects with tight time schedules. We also offer the project model S-PROPS – Pharma Fast Track™, which is specifically developed for the Life Science industry and a great tool for cutting project time.

Do you lack competences or resources at the right time?

We provide highly qualified and experienced consultants and experts when you need them. We also have a wide network of sub-contractors ready to be consulted in specialised areas.

Do not all of your team members strive towards the same goal?

Our certified project managers have great knowledge of goal definition and goal setting. Furthermore, they have vast experience of teamwork and stakeholder analysis. They help you not only in defining clear and reachable goals, but also in communicating these goals.

Do the prerequisites or priorities of your projects often change?

Our project managers provide the change-request tools to manage changes in a project's prerequisites, making consequences easier to overview. This can be essential for handling potential project risks, as well as for optimizing new project opportunities.

Do other tasks keep your project manager from focusing on the project?

We offer highly skilled project managers, deputy project managers and coaches prepared for full dedication to your project. A dedicated project manager is one of the key factors for successful projects.

Semcon Medical Life Science (MLS) is among the leading Nordic companies providing the pharmaceutical and medical device industry with consulting, engineering and contracting services. Semcon Medical Life Science has been in the business since 1987 and has a broad range of relevant skills and expertise that can contribute to make our clients more competitive.
